

News from Acta Virologica

It was over 100 years ago, when Martinus Willem Beijerinck introduced a new concept of "contagium vivum fluidum" or "virus". Since then, scientists have described many viruses in great detail and were able to assign them as a cause of a number of diseases. With each new information, the world of viruses seems more fascinating. Acta Virologica strives to publish up-to-date information on this topic.

Our Special Issues

New Insights on the Epidemiology, Vaccines, and Diagnosis of Animal and Human Viruses

This Special Issue aims to foster a comprehensive analysis of viral diseases that affect humans and animals by investigating their epidemiology, transmission pathways, diagnostic challenges, and potential vaccine solutions.

Virology in Central Europe: Past, Present, and Future

The goal of this Special Issue is to reflect on the history of virology in Central Europe and its continuation in today's world.

Editorial Board

Our international Editorial Board has experts in various fields of virology and we are always welcoming researchers interested in joining our community. We are particularly interested in hearing from experts in areas of, but not limited to:

- Virus-host interactions.
- Effective therapy (including computer modeling of virus-compound interactions).
- Prevention strategies.
- Veterinary medicine.
