Naturopathic Clinical Practicum 3B

General information

Awards	Subject type	Study year	Study Semester
Bachelor of Health Science (Naturopathy)	Core	Year 4	Semester 8

EFTSL: 0.1875

Delivery mode: On campus

Co-requisites: Nil

Pre-requisites: NATC425A

Subject overview

In this final clinic practicum before graduation as practitioners, students will evidence autonomous client assessment and care to fully support the transition into post-graduation practice. Students will fine-tune their Telehealth consultation practice alongside their onsite consultations. Students will demonstrate a high level of professional practice in all facets of naturopathic clinical care, evidencing a strong understanding of long-term client management including relevant and realistic use of diagnostic tests and naturopathic assessment techniques, and produce well considered, individualised and efficacious treatment plans and prescriptions for a diverse clientele base. Students will self-direct their clinical exploration and research in preparation for all follow up client consultations, will maintain well-kept records and evidence inter-professional communication skills.

This subject is clinical practicum undertaken in a working clinic, treating clients from the general public. To prepare the students for professional practice, this subject requires the student to maintain 100% attendance across the on-campus timetabled clinic sessions and workshop for the full 12 weeks.

Assessments: Continuous Skills Assessments
