# Silver Foil (Scodix)

## How to design and create Silver Foil files

Create a new colour swatch. Change the colour type to **Spot** and label the swatch **Silver**. Choose a colour that enables you to easily identify foil elements, e.g. **100% Cyan**.

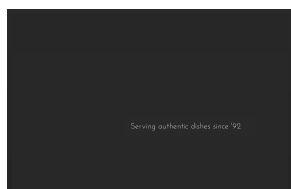

Duplicate pages you'd like to add foil to, select areas you want foiled and colour them with the Silver swatch. **Be sure to remove foil areas from printed pages.**

Be sure to leave a **2mm clear area** around the edge of the design and fold areas. This is required to avoid cracking when cut by the guillotine.

Supplied PDF must contain both print and foil elements as a single file. *(Example below)*

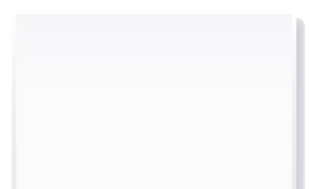

Page 1: **Front**

Page 2: **Back**

Page 3: **Foil**

Page 4: **Blank**

Avoid script fonts and keep text above 10pt to prevent foil bleeding within the lettering.
