# Gold Foil (Scodix)
## How to design and create Gold Foil files

Create a new colour swatch. Change the colour type to **Spot** and label the swatch **Gold**. Choose a colour that enables you to easily identify foil elements, e.g. **100% Yellow**.
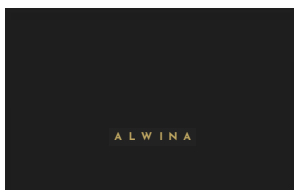

Duplicate pages you'd like to add foil to, select areas you want foiled and colour them with the Silver swatch. **Be sure to remove foil areas from printed pages.**

Be sure to leave a **2mm clear area** around the edge of the design and fold areas. This is required to avoid cracking when cut by the guillotine.

! Supplied PDF must contain both print and foil elements as a single file. *(Example below)*
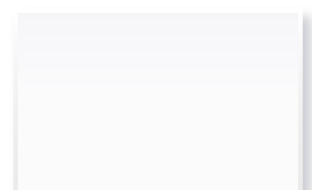

Page 1: **Front**

Page 2: **Back**

Page 3: **Foil**

Page 4: **Blank**

! Avoid script fonts and keep text above 10pt to prevent foil bleeding within the lettering.
