

# 4 Questions to Answer When Choosing Fire-Rated Containment

STARCSYSTEMS<sup>®</sup>

Containment beyond comparison.

## Does it pass ASTM rating requirements?

One-hour fire-rated containment must meet both ASTM E119 and E84 flame and smoke testing requirements. [Learn more.](#)

## Does it install quickly?

Fast installation is critical. Our FireblockWall™ modular fire-rated containment system installs four times faster than drywall.

## Does it meet all safety standards?

Temporary walls should contain, not create, dangerous construction dust - especially in sensitive environments. Ensure your choice meets all safety requirements, such as ICRA-IV.

## Is it reusable?

Unlike wasteful single-use drywall or plastic sheeting, our reusable FireblockWall system can be deployed for 100s of future projects - and pays for itself in just three to five uses!
